## 1 ISO Data Format

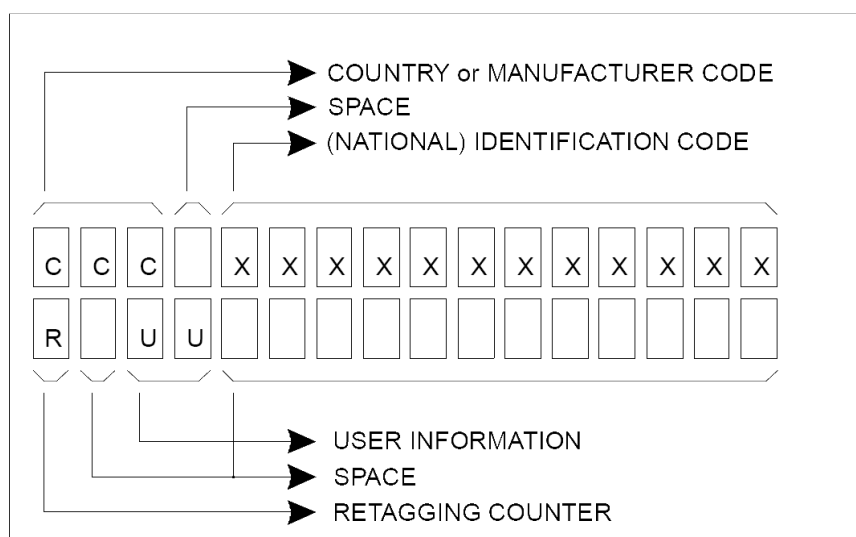

ISO 11784/11785 was amended to include specific data format instructions. ISO 24631-6 (Agricultural equipment – Radio frequency identification of animals – Part 6: Representation of the animal identification information (numeric displaying/communication) is amended to include below data format instructions. ARE H5 supports this data format from firmware version 6.35.

## **2 As of V6.35**

As of version 6.35 ARE H5 firmware only supports data format of ISO 24631-6. Transponder attributes and text are not displayed in the second display line if ISO Animal code format is selected.

## **3 As of V6.36**

As of version 6.36 changing of the "Code Format" from "ISO Animal" to "ISO Animal org." can be done. But only via database communication. The Reader Terminal can be used for this reason.

## **4 As of V2.40001**

As of version 2.40001 changing of the "Code Format" for ISO Animal format to the primary format, with transponder attributes and text in the second display line, can be done in the reader menu. The old format is now called "ISO Attributes".
